WHERE ENERGY MATTERS

REDUCE COSTS – CHARITABLE DONATIONS - CUT CARBON EMISSIONS

Savenergi have designed an innovative way to work with Charity Partners to provide a **WIN WIN** solution satisfying corporate social responsibility and energy saving demands.

In the tough economic climate **charitable donations** have come under increasing pressure as companies focus on **bottom line performance**.

Charities need extra and imaginative incentives to help facilitate sustainable company support. By delivering a reputable and **proven energy saving solution**, the cost savings allow both the Company and the Charity to agree a long term charitable donation program.

Savenergi help to facilitate this relationship by providing the technical expertise up front to define the scope of potential savings, an **Easy Payment Charity Partner Plan** over 3 to 5 years to maximise the savings from day one.

We make significant operational **cost savings** and introduce energy-saving devices that help organisations meet Government targets for **CO2 emission reductions**.

Savenergi – Charity Partnership Proposal

Savenergi's objective is to facilitate a long term relationship between the three parties by providing solutions in a cost effective way to make the returns on investment more attractive.

Driving reductions in Energy Costs on a year on year basis to generate a pool of savings it provides a platform for the Company & the Charity to agree a CSR program for their mutual benefit. In addition this direct and immediate action reduces the Company's carbon footprint from the day of installation.

Savenergi Ltd. is an energy consultant and distributor of technically-innovative energy-saving products and advice. Our service-driven, consultative approach to Government initiatives such as CRC and general energy reduction allows us to guide our customers towards energy efficiencies. We also reduce energy consumption for heating and water, providing an all-round service to lower your carbon emissions and help meet the significant current climate

Savenergi use the latest commercially-available Voltage Optimisation and Lighting technologies in our products, with the sole aim of maximising both energy-efficiency and lighting longevity, coupled with excellent light output for exterior and workspace lighting.

CASE STUDY

Unipart Technology Logistics

Savenergi were asked to provide Unipart with an all-encompassing solution to reduce the lighting costs at their Warwickshire facility.

All areas were improved, i.e. the main warehouse, the offices and building exterior. A solution was provided that cut costs by 60%, but also increased reliability and light quality ...

CASE STUDY

Corus Steel

Corus Steel has used Savenergi's MISER voltage reduction technology to slash the company's electricity bills for lighting and reduce CO₂ emissions.

The steel making group has installed Savenergi's MISER voltage technology controllers and demonstrated a 32% reduction in electricity consumption ...

In today's energy conscious environment our range of energy-saving devices is saving thousands of pounds every year on electricity bills for our customers and preventing tonnes of unnecessary carbon entering the atmosphere.

CASE STUDY

Molson Coors

380,000 square feet mixed space and £0.25m power bill.

Savenergi were tasked with cutting the onsite energy burn and reducing the CRC carbon footprint.

Other prerequisites were to deliver extra value and to accomplish this in a seamless manner with ongoing busy operations ...
