

Intelligent Power Management

REDUCE COST - EXTEND EQUIPMENT LIFE - CUT CARBON EMISSIONS

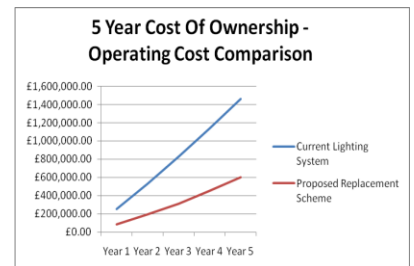

Solutions guaranteed to deliver long term Energy Savings

With the cost of Electricity continuing to rise, Savenergi can help your business **identify quantifiable cost savings** which can be counted on year after year.

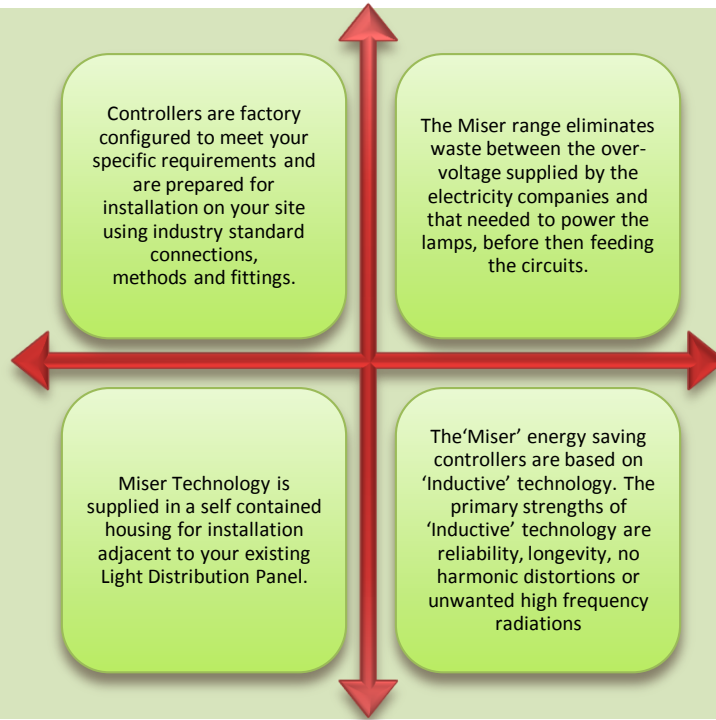

As electricity charges per kWh increase then the bottom line savings increase accordingly. Payback periods are attractive especially with our **Savenergi as a Service** model where quarterly payments are covered by the net savings.

By installing our Technically advanced Voltage Optimisation solutions we can deliver **up to 12% electricity cost savings** from day one.

To start to benefit from this service, we carry out an initial telephone **energy audit** to assess the potential savings are achievable. This is followed up by an on-site audit and the production of a Savenergi Service Report including a full return on investment appraisal.

Intelligent Power Management

The table below identifies some of our existing customers who continue to benefit every day from the savings delivered by our Low Maintenance MISER power management units.

Client	Nature of Business	Location(s)	Areas covered by VO
